

MAGNETIC LIFTING

LIFT • TRANSPORT • HOLD

Flaig Magnetsysteme GmbH from Hardt in the Black Forest has been manufacturing magnets for lifting, clamping and holding for more than 25 years. We manufacture a wide range of standard and special solutions of all kinds on modern machines. Our experience and our innovative spirit make us a competent partner for magnetic applications.

Flaig Magnetsysteme - From experience and innovation

Lifting Magnets

Lifting magnets are the perfect load handling device for anyone who needs to work quickly and safely. A multitude of advantages speak for their use, wherever loads have to be held without a handle. In material storage, transportation, fixture construction and when loading and unloading machines.

We offer a wide range of different designs and technical concepts, from the broadly applicable standard product to the individually tailored for your special application.

When selecting lifting magnets, please refer to the technical information starting on page 52 in the catalog.

All holding force data have been determined in accordance with the test method for lifting magnets in EN 13155, on a test plate of low carbon steel, suitable thickness and flatness less than 0.1/500 mm.

We will be pleased to advise you at any time on special handling problems.

MBX Magnetic Clamping Blocks

FX-Lift is the product line developed according to the needs of the users

Permanent Lifting Magnets

The FX base unit is suitable for flat and round material

FX-R - suitable if you need to lift mostly round and/or hot material

FX-P - when it comes to sheets less than 12mm thick and tubes - the right device for the laser cutting machine

FX-C - especially suitable for rings and sleeves

FX-LT - Lightweight truss with 2-strand chain for sheets and workpieces with centric cutout

FX-RV - especially suitable for profiles, beams and hot parts 150°C/100%.

FX-HV - specially designed for horizontal and vertical transport

FX-KT - especially for the transport of workpieces with central cut-out

Electro-Permanent Lifting Magnets

FXE-L 50+ long design with reinforced magnet system for tubes, beams and strips

FXE-100 - for heavy plates, forgings, cast ingots

FXE-HD - for heavy workpieces from 7.2t

FXE-M - modular system for the assembly of trusses or for pick & place systems

FXE 50 - for sheets from 4mm and workpieces with small air gap

FXE 80 - for lifting sheets from 8mm; for solid parts with medium air gap

FXE-R - for round and flat material also in layers

FXE-T - Electro permanent magnetic truss for sheet metal

Digital & Immortal

FX Refund & FX Green Dot

The FX series is the world's best lifting magnet program when it comes to technology, quality and completeness. To keep it that way, we are consistently developing our products and are now making magnetic lifting sustainable and digital.

Circular economy

100% Recyclable

Each device comes with a defined FX Refund value, which is refunded by us when it is sent in for recycling.

FX Green Dot

FX lifting magnets are equipped with the Green Dot, an NFC chip that provides the user with all important information.

Manufacturer guarantee

5 year guarantee on all FX lifting magnets

CE & S-class compliant

All FX lifting magnets are standard-compliant in accordance with the current EN 13155:2022

Corrosion protection

FX lifting magnets are protected against corrosion by nickel-plated surfaces

Exclusive Benefits of the FX-Series

FX - Economically the right decision

- Made in Germany
- Standard-compliant and tested
CE/EN 13155:2022/MRL 2006/42 EWG
- Product liability insurance with a German insurance company
- Multilingual Documentation
- Environmentally friendly and future-proof by higher Power with lower SE Magnet consumption
- 5 years Warranty
- Safety factor 3,5
- supply of spare parts guaranteed for 10 years
- CAD Data available
- Facilitated document management for work safety

FX - Technically the right decision

- 100% nickel
- High Energy half-shell Magnets
- actuator travel of only 90°
- large forged lifting eye (SF5)
- great performance in a compact design
- short loading- and unloading times
- no mechanical impairment of workpiece
- very massive shift shaft
- recoilless hand operation
- suitable for flat and round materials
- increased safety via simple operation
- **2006/42 EWG / S-Class 8** = >2.000.000 Load cycles acc. to EN 13001

High energy magnets, ensures stable performance up to the maximum working temperature of 80°C.

Monoblock solenoid shaft, made of one piece, fully plated, ball bearing without mechanical flaw

Massive stator-body manufactured from one piece, completely plated, for maximum corrosion protection

Common Lifting Magnets

Recessed or welded shifter shaft with
Built-in magnets, 180° theoretical switching travel,
Weakened or welded shaft, 3 air gaps

FX Lifting Magnets

Massive switching shaft with mounted magnets,
90° theoretical switching travel, extremely robust,
Only one air gap

FX Universal Permanent Lifting Magnets

FX lifting magnets in standard design convince by their wide field of application. The FX achieves good results with large air gaps as well as with thin flat and round materials with a compact design and low weight. The device is characterized by great robustness and a very good price/performance ratio.

FX-R Permanent Lifting Magnets especially suitable for round material

FX-R is the lifting magnet series for round material handling. The deep shallow-angled prism ensures safe positioning on the load and directs the magnetic field deep into the material. The magnet system can be switched well in the entire diameter range and does not recoil, shearing of the load due to twisting is prevented by the overlapping prism. Flat material, even with low material thickness, is no problem for the FX-R. With hot workpieces, the deep prism protects the magnetic core from overheating.

FX-P Permanent lifting magnets especially for thin sheets and tubes

FX-P is the lifting magnet series for professional lifting and moving of thinner sheets, tubes and bars. The special magnet configuration in combination with the prismatic pole of the FX-P ensures maximum flux density at low material thicknesses. The FX-P is easy to position and operate on round material.

for thin sheet

FX-VV Permanent lifting magnets with 90° double prism for beams and profiles

FX-VV are perfect for metal construction. They have a long, narrow design for picking up beams and profiles - even on the inner web of the beam - and achieve their maximum holding force even with comparatively low material thickness, so that even thin sheets can be lifted safely. Thanks to the 90° double prism, angle profiles can now be picked up inside and outside or components can also be turned.

The FX-VV, like all FX models, has a completely nickel-plated magnet body and delivers very good test results, even with rough surfaces. The FX-VV also has a stable, smooth-running single-hand control.

150°C/100%

FX-C Permanent lifting magnets especially for rings and sleeves

FX-C lifting magnets have a round, multi-pole clamping surface, designed for lifting rings, sleeves, bearing housings, flange plates and similar workpieces.

The load specification applies to full-surface contact with workpieces covering D inside to D outside (see table of dimensions); for workpieces with a smaller contact surface, a maximum workpiece weight of 3.5 kg per cm² of clamping surface can be roughly calculated. For series workpieces, a documented test should then confirm the safety factor of 3.

Model	Item Nr.	Dimensions (mm)					WLL from (mm)	WLL (kg)	WLL per cm ² contact surface (kg)	Weight (kg)
		D	Da-Di	H	Hs	Bs

FX-VV HOT Permanent lifting magnets for hot workpieces up to max 300°C

FX-VV HOT for hot parts. A special permanent magnet system allows working temperatures of up to 300°C. Ideal for moving heated tools and dies, or heat-treated workpieces. The maximum continuous working temperature is 250°C - in peaks up to max. 5 minutes at 300°C.

FX-HV Horizontal-Vertical systems

The FX-HV Horizontal Vertical System meets almost every need with its wide range of adjustment options. Overall height and center of gravity can be adjusted via plug-in bolts. Likewise, the unit can be used for up to 20% of its rated load without the undergripping supports. The support bolts are positioned in such a way that upright circular blanks can be attached, which is often required at the saw, for example.

Likewise, horizontal discs and sheets can be set up. For horizontal transport, the system has a crane eye on the back. The steel construction is completely powder-coated, and the stable FX load lifting magnet ensures maximum safety. Special dimensions are available on request.

FX-HV V200-S Special model

FX-LT Permanent Magnetic truss

FX-LT magnetic trusses are adapted to the needs of sheet metal fabricators, laser and flame cutters. Two FX-VV lifting magnets and a lightweight truss enable loading and unloading of machines with sheet metal, or horizontal pick-up of workpieces with a central cutout. In a few simple steps, the magnets can be removed from the truss to lift blanks and small sheets with only one magnet.

Included:

- 2 Lifting magnets
- Truss with suspension elements

Quickly dismantled for single use

Optionally available with 360° rotating device

FX-KT Small trusses

FX-KT small trusses are adapted to the needs of sheet metal processors, laser and flame cutters. Two FX magnets and an adjustable small truss enable the transport of workpieces with a central cutout. In particular, rings and cylindrical workpieces with a central cutout can be transported efficiently and effortlessly with the FX-KT.

In just a few steps, the magnets can be removed from the truss to lift blanks and small sheets with only one magnet.

HX Permanent Magnetic Transporter

HX magnetic transporters are the ideal tool for moving sharp, hot, and difficult-to-grip parts safely and quickly. The powerful ND magnet system can be activated and deactivated with just a 45° switch travel. Ball-bearing magnet shafts and corrosion-protected surfaces ensure a long service life.

Depending on the application, you can choose between different handle variants and lengths. A safety factor of 2.5 ensures sufficient reserves when using the HX magnetic transporter manually.

We recommend the HX for clearing cutting tables, pulling parts from saws, positioning parts in welding fixtures, guiding workpieces on cranes, lifting parts from boxes, and many other applications.

Permanent Lifting Magnets in Special Solution

We manufacture permanent lifting magnets with a wide variety of special pole shoes and as load trusses for almost all geometries. We manufacture magnets for spherical surfaces, with long pole shoes, for rings, sleeves, and profiles. All special lifting magnets are designed, tested, and documented in accordance with EN 13155:2022 and MRL 2006/42 EEC.

Electro-Permanent Lifting Magnets

Electro-Permanent magnet technology stands for maximum safety when it comes to lifting magnets. The advantages of the reliability of permanent magnets and the user-friendliness of electromagnets are combined in a single concept. In the event of a cable break or power failure, the lifted load cannot drop. There are no batteries to maintain, activation/deactivation takes place at the touch of a button or by radio, and the pole reversal control ensures safe release of the magnets from the workpiece. We offer suitable solutions for different requirements.

Page 23 - 37

FXE electro-permanent lifting magnets are equipped with onBoard control technology for direct connection to mains voltage - the fast, user-friendly plug & play solution for loads up to 7.2t

Page 26 - 27

FXE-L in long, narrow design for holding support profiles, strips, tubes and rods achieve their maximum holding force already from 15mm material thickness

Page 34 - 35

Page 50 - 51

Excavation magnets and suitable controls

Within the application concepts described, FXE has 4 different magnetic field designs, defined by different pole configurations. The appropriate pole design must be selected depending on the requirements profile.

Pole type 50

Pole type 50 is designed for lifting sheet metal from 4mm and steel parts with flat or machined surface. The rated values of the FXE lifting magnets with pole type 50 are achieved up to an air gap of 0.3mm. With air gap 0, the pole 50 achieves 3.8 kN holding force.

Pole type 50+

Pole type 50+ has a reinforced magnet system with the same pole size as pole type 50. This results in better holding forces with poorer surfaces, especially when pole extensions are required. 3.8 kN holding force.

Pole type 80

Pole type 80 is designed for lifting sheets from 8mm and solid steel parts and flame cuts with medium air gap. The ratings of FXE lifting magnets with pole type 80 are achieved up to an air gap of 0.4mm. At air gap 0, each pole 80 achieves 9 kN holding force.

Pole type 100

Pole type 100 is designed for lifting heavy plates from 10mm and solid steel, formed and forged parts with larger air gap. The ratings of FXE lifting magnets with pole type 100 are achieved up to an air gap of 0.6mm. At air gap 0, each pole 100 achieves 14.5 kN holding force.

FXE Electro-Permanent Lifting Magnets

FXE lifting magnets are the professional solution for frequent handling of workpieces.

They are very robustly built and designed for continuous use. The electrical control allows the operator to switch the device without physical effort, even in places that are difficult to access. The permanent magnet system is activated in just 0.8 seconds at the touch of a button, and the workpiece is safely released when it is switched off. The unit is simply connected to mains voltage. This means that the unit is ready for use with very little installation effort. In the event of a power failure, the load is held by the permanent magnetic field. This eliminates the need for vulnerable and high-maintenance back-up batteries. A quick conversion of crane systems with conventional mains-powered electromagnets is possible without any problems. FXE lifting magnets comply with the latest standards and offer the maximum in safety and ease of operation. With our standard sizes up to 7200 kg, we have the right device for almost every application.

FXE-150/50+ • FXE-300/50 • FXE-500/50 Electro-Permanent Lifting Magnets

Equipped with pole type 50/50+ and a maximum load capacity of 150/300/500 kg, which is achieved with material thickness from 15 mm, and with small magnetically active surfaces, these easy-to-guide and easy-to-operate devices are recommended for lifting series parts as well as small cast and forged parts. These easy-to-guide and operate devices are recommended for lifting series parts, blanks and small cast and forged parts.

FXE-MH Elektro-Permanent Lifting Magnets

FXE-MH electro-permanent lifting magnets are especially suitable for transporting slabs and blocks. MH type electro-permanent modules are designed to safely lift large loads with a large air gap.

FXE Electro-Permanent Lifting Magnets

The FXE electr-o-permanent lifting magnet series can be customized with smart accessories to further increase productivity and safety.

Spiral cable

The standard delivery includes 2m of heavy rubber spiral cable and a CEE three-phase plug (16/32A). High-quality spiral cables make sense especially for small fast hoists, up to 4m hook height a spring cable drum can be dispensed with altogether.

Lifting eye sensor

The lifting eye sensor checks whether the lifting eye on the magnet is under tension and allows demagnetization only when the lifting eye is load-free. This provides more safety, but prevents the option of dropping pieces of waste over a container, for example.

Guide handle

Especially when removing small workpieces from the flame cutting table, the magnet cannot only be positioned with the crane, but must be guided manually. The „guide handle“ option is recommended here. With integrated switching, this allows the operator to conveniently clear the table from the side.

Special pole shoe

For holding hot parts, we recommend the use of heat protection pole shoes. For round material, profiles or non-shaped castings, we manufacture customer-specific pole shoes so that the pick-up surface fits the load.

Radio Remote Control

Radio has a range of at least 30m, but therefore it is also recommended to use the option „lifting eye sensor“ when using a radio remote control.

Spring cable reels

Spring cable reels can be installed directly on the crane trolley to supply the bottom block with power for FXE electro-permanent lifting magnets. Spring cable reels are available for any lifting height to match the system.

Article	Item-Nr.	Weight (kg)
Spiral cable 3x2.5 1-5m	1013 5325	2

FXE-LT Elektro-Permanent Magnetic Truss

FXE-LT electro permanent lifting magnet trusses in a compact design with onboard control technology are designed for the frequent handling of larger formats such as sheets with poor surfaces. Like the FXE lifting magnets, they can be operated directly from the mains voltage and are therefore very quick to install and ready for use. They are controlled directly on the device or optionally via a remote control.

The magnetic modules are adjustable to safely transport various sheet metal lengths from a minimum of 600mm to a maximum of 5000mm. The two holding modules can be rotated by 45° or 90° to also accommodate sheet metal cutouts or strips.

Delivery includes:

- Remote control with mit Pick Up-Function for destacking sheet from 3mm
- 2-strain chains
- Lifting-eyelet sensor, demagnetizing only possible when load-free
- LED stripe indication light
- Handle
- Plug & Play connection
- Rotation device

FXE-T7200/9600 Magnetic Truss

The FXE-T Electro Permanent Magnetic Truss is a fully equipped standard unit with all options. The truss with 7200 kg max. load is equipped with sliding magnetic modules and can thus safely move sheet formats from min. 1200mm length to max. 6000mm length.

Delivery includes:

- Radio remote control with Pick Up function to lift individual plates from 6mm
- Weld-on hooks on the sides for each 4t max.
- 2-strain chains
- Lifting-eyelet sensor, demagnetizing only possible when load-free
- LED stripe indication light
- Stainless steel guide handles
- Primary connection cable ready for 400V/25A fuse/CEE 32A plug

FXE-TT Telescopic Magnetic Truss

FXE-TT telescopic trusses are equipped with electro-hydraulic telescopic arms and are suitable for handling sheets of 3-16m length.

The system consists of fixed and movable crossbars, each equipped with two magnetic modules.

The truss length can be adjusted individually via radio remote control. The magnetic system can be switched on the truss itself or on the radio remote control included in the scope of delivery.

Clever Details

- Main beam formed as super-stiff sectional tube; tested for 600,000 load cycles
- Suspension from one or two crane hooks possible
- 4 additional anchor points for load handling attachments of 4.5 t each or optionally also weld-on hooks
- Service flap at the head ends
- Internal energy chain for cable routing
- Easily accessible OnBoard control and service flaps at all connection points
- Spiral cables supply the floating suspended magnetic modules
- Spring dampers in the magnetic suspension provide compensation for deflection and even load distribution
- A massive switching mechanism checks the chain tension and allows loosening only when the chain is load-free
- Maintenance-free LED signal lamp
- Ergonomic and handy radio remote control
- Supplied with power plug - Plug and Play

FXE-TP Electro-Permanent Magnetic Truss

FXE-TP electro-permanent lifting magnets are ideally suited for beams and profiles due to their special design. The 3-sided active pole surface allows to pick up beams at the web or to rotate them as well. FXE-TP lifting magnets are also available as a truss solution, specially tailored to your application.

Application video here

FXE-TX Electro-Permanent Magnetic Trusses

FXE TX lifting magnet trusses are used to clear large areas of laser or flame cutting tables. Parts from 100x100mm are removed from the table in layers.

Depending on the material thickness, sheets can also be placed with the FXE-TX. The design of the system depends on the sheet format to be moved (uncut, LxWxH) and the dimensions of the smallest cut.

FXE-M Modular Electro-Permanent Lifting Magnets

FXE-M electro-permanent load lifting magnet modules can be combined with MCF magnet control units to form modular load lifting systems. Thus, a single FXE-M module with an MCF 1-channel control unit can be used, for example, on the crane of a flame cutting plant, or 4 FXE-M modules, controlled together or individually by an MCF 4-channel control unit, can work in a fully automatic sectional steel plant.

In use on cranes, manipulators, conveyor systems and robots, FXE-M modules have proven themselves thousands of times. FXE-M modules are manufactured in monoblock technology and are extremely stable.

As with the other products in the FXE series, there is a choice of 4 different pole types to select the right magnet module for the load, dimensions and surface.

Magnetic Lifting

FXE-M More models and special solutions

MCF Control unit

The MCF control units are designed to operate electro-permanent magnet modules and are available both as a single board for installation in the customer's existing control cabinets and as an IP 54 control cabinet solution.

In addition to the FXE lifting magnet modules, other E-perm magnet components such as clamping plates or clamping blocks can also be controlled with the MCF, both as a single system (ALNICO) and as a double system (ALNICO/ND). The power and communication parameters of the MCF can be set to customer specifications at the factory, and individual magnets and groups can be controlled, with partial and full magnetization.

Floating outputs and signal outputs provide feedback on the switching status and ensure a very high safety standard. An on-board current control system checks at each cycle whether sufficient power has been absorbed by the magnet module.

The MCF can be controlled via a machine controller, radio remote control, manual pushbutton or other potential-free contacts.

MCF single and multi-channel controllers in IP 54 industrial design are manufactured as standard devices or in customer-specific configuration.

ERM-X Excavation Magnets

For lifting ground parts, bulk material and for occasionally sorting out magnetizable parts. ERM-X are equipped with a mounted switch and integrated rectifier for direct connection to 230V mains voltage. The field depth is approx. 80-120mm. Not permitted for transporting solid workpieces in unsecured areas.

POLE REVERSAL DEVICES for Excavation Magnets

The use of pole reversal control units to control excavation magnets makes it possible to adjust the magnetic field very precisely. This means that the holding force of the USG can be infinitely adjusted and, when switched off, performs a demagnetization cycle to ensure that all parts are released and unwanted residual magnetism in the workpiece is minimized.

USG pole reversal control units can be controlled via potential-free contacts with machine controls or buttons in the crane operation and provide feedback on their switching status. As an option, we can also supply manual control units and signal light sets to match the pole reversal control units.

Optionally available: signal light set and hand control unit

Model	Item-Nr.	Dimensions (mm)			Output voltage*	max. output power	Connection	Weight (kg)

*also available in other voltages

Factors affecting the Holding powers of Lifting magnets

For choosing the right lifting magnet model five other factors to consider that affect the lifting force other than the weight of the load:

1. The contact surface

If a distance (air gap) exists between the lifting magnet and the load to be lifted, the magnetic flux is made more difficult and thus reduces the lifting capacity. Rust, paint, dirt, paper or rough machined surface can have such an air gap result and in turn mean a reduction in the lifting force.

2. Material thickness

The magnetic flux of the lifting magnets requires a minimum material thickness. If the workpiece does not reach this minimum thickness, the lifting force is smaller. For larger lifting benefits greater material thicknesses are required.

3. Workpiece dimensions / intrinsic stability

If the length or width of the load is larger, the workpiece sags and is formed between the lifting magnet and the load - especially at low material thicknesses - an air gap. This reduces the lifting force of the lifting magnets.

Factors affecting the Holding powers of Lifting magnets

4. Composition of the Load to be lifted

Steel with low carbon content is a good magnetic conductor eg F1110 or St37. Steel alloy with a high carbon content or with other materials such as steel loses its magnetic properties so that the power of the lifting magnets is low. Heat treatments which affect the steel structure also reduce the lifting power. The harder a steel the worse its response to magnets, and it tends to retain a residual magnetism. The nominal power of our lifting magnets is valid for a steel with low carbon content, such as C 40 / St37.

Material	Lifting power (%)
Carbon Steel 0,1 - 0,3 % C ST37/52	100
Carbon Steel 0,4 - 0,5 % C	90
Alloy Steel 2312/2379...	80 - 90
cast iron GGG	70 - 80
cast iron GG	45 - 60
Alloy Steel hardened at 55-60 HRc	40 - 50
Stainless Steel	0
Brass, Aluminum, Copper	0

5. Temperature of the Load to be lifted

The higher the temperature the faster the molecules vibrate the steel. Quick vibrating molecules provide the magnetic flux higher resistance. Our data apply to max. 80°C.

In almost the same way, the factors making 1,2,4,5 also noticeable in the magnetic clamping.

MBX Magnetic Clamping Blocks

MBX magnetic clamping blocks have opposite clamping sides that are activated when actuated. They are designed to clamp workpieces on steel surfaces such as machine or assembly tables.

Several MBX can also be connected to each other via the internal hexagon of the switching shaft in order to clamp longer or larger workpieces. The activation takes place via the removable switching key with only 90° switching travel, the surfaces of the MBX are completely nickel-plated.

With the two differently shaped clamping sides of the MBX, almost any workpiece geometry can be held, regardless of whether round material, sheets or even profiles are to be clamped.

The MBX magnetic clamping block clamps to the table and clamps the workpiece

MBX are the ideal clamping device for clamping workpieces for drilling, deburring, welding or thread cutting on welding or deburring tables quickly, flexibly and without interfering contours.

Suitable for drilling, grinding, welding...
also vertical

Suitable for angle material

Suitable for round material

Suitable for flat material

Tip: The 90° pick ledges of the MBX can be replaced with workpiece-specific pick ledges

Tip: Several MBXs can be switched simultaneously
